

NU-R9400

A solid industrial standard 19" 4U rackmount chassis that can host both PS/2 and mini-redundant power supply, through a removable rear bracket. Each component is a place reserved for which it is intended, such as add-on cards that will be held down with provided retainer, HDD cushion modules to absorb shocks and preserve your hard drives for damage or the optional HDD cage just behind a 12cm fan, enhancing the heat dissipation from the source.

The front access to 2xUSB ports, to the PS/2 keyboard connector and to the removable dust filter, rounds off the profile of this simple but optimal equipped chassis.

If you need to upgrade your system with suitable mobile racks, backplanes or else, visit our website to review related products.
